1. Introduction to this report

This report presents the findings of the 2017 national NHS staff survey conducted in Hertfordshire Partnership University NHS Foundation Trust.

In section 2 of this report, we present an overall indicator of staff engagement. Full details of how this indicator was created can be found in the document *Making sense of your staff survey data*, which can be downloaded from www.nhsstaffsurveys.com.

In sections 3, 4, 6 and 7 of this report, the findings of the questionnaire have been summarised and presented in the form of 32 Key Findings.

In section 5 of this report, the data required for the Workforce Race Equality Standard (WRES) is presented.

These sections of the report have been structured thematically so that Key Findings are grouped appropriately. There are nine themes within this report:

- Appraisals & support for development
- Equality & diversity
- Errors & incidents
- Health and wellbeing
- Working patterns
- Job satisfaction
- Managers
- Patient care & experience
- Violence, harassment & bullying

Please note, two Key Findings have had their calculation changed and there have been minor changes to the benchmarking groups for social enterprises since last year. For more detail on these changes, please see the *Making sense of your staff survey data* document.

As in previous years, there are two types of Key Finding:

- percentage scores, i.e. percentage of staff giving a particular response to one, or a series of, survey questions
- scale summary scores, calculated by converting staff responses to particular questions into scores. For each of these scale summary scores, the minimum score is always 1 and the maximum score is 5

Responses to the individual survey questions can be found in Appendix 3 of this report, along with details of which survey questions were used to calculate the Key Findings.
Your Organisation

The scores presented below are un-weighted question level scores for questions Q21a, Q21b, Q21c and Q21d and the un-weighted score for Key Finding 1. The percentages for Q21a – Q21d are created by combining the responses for those who “Agree” and “Strongly Agree” compared to the total number of staff that responded to the question.

Q21a, Q21c and Q21d feed into Key Finding 1 “Staff recommendation of the organisation as a place to work or receive treatment”.

</tbody>
</table>
2. Overall indicator of staff engagement for Hertfordshire Partnership University NHS Foundation Trust

The figure below shows how Hertfordshire Partnership University NHS Foundation Trust compares with other mental health / learning disability trusts on an overall indicator of staff engagement. Possible scores range from 1 to 5, with 1 indicating that staff are poorly engaged (with their work, their team and their trust) and 5 indicating that staff are highly engaged. The trust's score of 3.87 was above (better than) average when compared with trusts of a similar type.

OVERALL STAFF ENGAGEMENT

The table below shows how Hertfordshire Partnership University NHS Foundation Trust compares with other mental health / learning disability trusts on each of the sub-dimensions of staff engagement, and whether there has been a significant change since the 2016 survey.

<table>
<thead>

<tr>
<td>(the extent to which staff are able to make suggestions to improve the work of their team, have frequent opportunities to show initiative in their role, and are able to make improvements at work.)</td>
<td></td>
</tr>
</tbody>
</table>

Full details of how the overall indicator of staff engagement was created can be found in the document *Making sense of your staff survey data.*
3. Summary of 2017 Key Findings for Hertfordshire Partnership University NHS Foundation Trust

3.1 Top and Bottom Ranking Scores

This page highlights the five Key Findings for which Hertfordshire Partnership University NHS Foundation Trust compares most favourably with other mental health / learning disability trusts in England.

TOP FIVE RANKING SCORES

- **KF32. Effective use of patient / service user feedback**
  - Scale summary score
  - Trust score 2017: 3.88
  - National 2017 average for mental health: 3.72

- **KF13. Quality of non-mandatory training, learning or development**
  - Scale summary score
  - Trust score 2017: 4.14
  - National 2017 average for mental health: 4.06

- **KF4. Staff motivation at work**
  - Scale summary score
  - Trust score 2017: 3.97
  - National 2017 average for mental health: 3.91

- **KF31. Staff confidence and security in reporting unsafe clinical practice**
  - Scale summary score
  - Trust score 2017: 3.80
  - National 2017 average for mental health: 3.71

- **KF1. Staff recommendation of the organisation as a place to work or receive treatment**
  - Scale summary score
  - Trust score 2017: 3.85
  - National 2017 average for mental health: 3.67
This page highlights the five Key Findings for which Hertfordshire Partnership University NHS Foundation Trust compares least favourably with other mental health / learning disability trusts in England. It is suggested that these areas might be seen as a starting point for local action to improve as an employer.

**BOTTOM FIVE RANKING SCORES**

1. **KF16. Percentage of staff working extra hours**  
   *(the lower the score the better)*
   - Trust score 2017: 76%  
   - National 2017 average for mental health: 72%

2. **KF23. Percentage of staff experiencing physical violence from staff in last 12 months**  
   *(the lower the score the better)*
   - Trust score 2017: 3%  
   - National 2017 average for mental health: 3%

3. **KF26. Percentage of staff experiencing harassment, bullying or abuse from staff in last 12 months**  
   *(the lower the score the better)*
   - Trust score 2017: 24%  
   - National 2017 average for mental health: 21%

4. **KF10. Support from immediate managers**  
   *(the higher the score the better)*
   - Trust score 2017: 3.89  
   - National 2017 average for mental health: 3.95

5. **KF20. Percentage of staff experiencing discrimination at work in the last 12 months**  
   *(the lower the score the better)*
   - Trust score 2017: 17%  
   - National 2017 average for mental health: 14%

For each of the 32 Key Findings, the mental health / learning disability trusts in England were placed in order from 1 (the top ranking score) to 26 (the bottom ranking score). Hertfordshire Partnership University NHS Foundation Trust’s five lowest ranking scores are presented here, i.e. those for which the trust’s Key Finding score is ranked closest to 26. Further details about this can be found in the document *Making sense of your staff survey data.*
3.2 Largest Local Changes since the 2016 Survey

This page highlights the Key Finding that has deteriorated at Hertfordshire Partnership University NHS Foundation Trust since the 2016 survey. It is suggested that this might be seen as a starting point for local action to improve as an employer.

WHERE STAFF EXPERIENCE HAS DETERIORATED

<table>
<thead>
<tr>
<th>KF18. Percentage of staff attending work in the last 3 months despite feeling unwell because they felt pressure from their manager, colleagues or themselves (the lower the score the better)</th>
<th>Percentage score</th>
</tr>
</thead>
<tbody>
<tr>
<td>Trust score 2017</td>
<td>54%</td>
</tr>
<tr>
<td>Trust score 2016</td>
<td>47%</td>
</tr>
</tbody>
</table>

Because the Key Findings vary considerably in terms of subject matter and format (e.g. some are percentage scores, others are scale scores), a straightforward comparison of score changes is not the appropriate way to establish which Key Findings have deteriorated the most. Rather, the extent of 2016-2017 change for each Key Finding has been measured in relation to the national variation for that Key Finding. Further details about this can be found in the document *Making sense of your staff survey data.*
3.3. Summary of all Key Findings for Hertfordshire Partnership University NHS Foundation Trust

**KEY**

Green = Positive finding, e.g. there has been a statistically significant positive change in the Key Finding since the 2016 survey.

Red = Negative finding, e.g. there has been a statistically significant negative change in the Key Finding since the 2016 survey.

Grey = No change, e.g. there has been no statistically significant change in this Key Finding since the 2016 survey.

For most of the Key Finding scores in this table, the higher the score the better. However, there are some scores for which a high score would represent a negative finding. For these scores, which are marked with an asterisk and in **italics**, the lower the score the better.

### Change since 2016 survey

| KF11. % appraised in last 12 mths
| KF20. % experiencing discrimination at work in last 12 mths
| *KF21. % believing the organisation provides equal opportunities for career progression / promotion
| *KF28. % witnessing potentially harmful errors, near misses or incidents in last mth
| KF29. % reporting errors, near misses or incidents witnessed in last mth
| *KF17. % feeling unwell due to work related stress in last 12 mths
| *KF18. % attending work in last 3 mths despite feeling unwell because they felt pressure
| KF15. % satisfied with the opportunities for flexible working patterns
| *KF16. % working extra hours
| KF7. % able to contribute towards improvements at work
| KF6. % reporting good communication between senior management and staff
| KF3. % agreeing that their role makes a difference to patients / service users
| *KF22. % experiencing physical violence from patients, relatives or the public in last 12 mths
| *KF23. % experiencing physical violence from staff in last 12 mths
| KF24. % reporting most recent experience of violence
| *KF25. % experiencing harassment, bullying or abuse from patients, relatives or the public in last 12 mths
| *KF26. % experiencing harassment, bullying or abuse from staff in last 12 mths
| KF27. % reporting most recent experience of harassment, bullying or abuse

4. Key Findings for Hertfordshire Partnership University NHS Foundation Trust

Hertfordshire Partnership University NHS Foundation Trust had 1369 staff take part in this survey. This is a response rate of 47%\(^1\) which is average for mental health / learning disability trusts in England (52%), and compares with a response rate of 42% in this trust in the 2016 survey.

This section presents each of the 32 Key Findings, using data from the trust's 2017 survey, and compares these to other mental health / learning disability trusts in England and to the trust's performance in the 2016 survey. The findings are arranged under nine themes: appraisals and support for development, equality and diversity, errors and incidents, health and wellbeing, working patterns, job satisfaction, managers, patient care and experience, and violence, harassment and bullying.

Positive findings are indicated with a green arrow (e.g. where the trust is better than average, or where the score has improved since 2016). Negative findings are highlighted with a red arrow (e.g. where the trust's score is worse than average, or where the score is not as good as 2016). An equals sign indicates that there has been no change.

**Appraisals & support for development**

</table>

\(^1\)Questionnaires were sent to all 2917 staff eligible to receive the survey. This includes only staff employed directly by the trust (i.e. excluding staff working for external contractors). It excludes bank staff unless they are also employed directly elsewhere in the trust. When calculating the response rate, questionnaires could only be counted if they were received with their ID number intact, by the closing date.

5. Workforce Race Equality Standard (WRES)

The scores presented below are the un-weighted question level score for question Q17b and un-weighted scores for Key Findings 25, 26, and 21, split between White and Black and Minority Ethnic (BME) staff, as required for the Workforce Race Equality Standard.

In order to preserve the anonymity of individual staff, a score is replaced with a dash if the staff group in question contributed fewer than 11 responses to that score.

6. Key Findings by work group characteristics

Tables 6.1 to 6.4 show the Key Findings at Hertfordshire Partnership University NHS Foundation Trust broken down by work group characteristics: occupational groups, locations, and full time/part time staff.

Technical notes:

- As in previous years, there are two types of Key Finding:
  - percentage scores, i.e. percentage of staff giving a particular response to one, or a series of, survey questions
  - scale summary scores, calculated by converting staff responses to particular questions into scores. For each of these scale summary scores, the minimum score is always 1 and the maximum score is 5

- For most of the Key Findings presented in tables 6.1 to 6.4, the higher the score the better. However, there are some Key Findings for which a high score would represent a negative result. For these Key Findings, marked with an asterisk and shown in italics, the lower the score the better.

- Care should be taken not to over interpret the findings if scores differ slightly. For example, if for 'KF11. % appraised in the last 12 months' staff in Group A score 45%, and staff in Group B score 40%, it may appear that a higher proportion of staff in Group A have had appraisals than staff in Group B. However, because of small numbers in these sub-groups, it is probably not statistically significant. A more sensible interpretation would be that, on average, similar proportions of staff in Group A and B have had appraisals.

- Please note that, unlike the overall trust scores, data in this section are not weighted.

- Please also note that all percentage scores are shown to the nearest 1%. This means scores of less than 0.5% are displayed as 0%.

- In order to preserve anonymity of individual staff, a score is replaced with a dash if the staff group in question contributed fewer than 11 responses to that score.
Due to low numbers of respondents, no scores are shown for the following occupational groups: Adult / General Nurses, Physiotherapy, Maintenance / Ancillary, Emergency Care Practitioner and Patient Transport Service.

7. Key Findings by demographic groups

Tables 7.1 and 7.2 show the Key Findings at Hertfordshire Partnership University NHS Foundation Trust broken down by different demographic groups: age group, gender, disability and ethnic background.

Technical notes:

- As in previous years, there are two types of Key Finding:
  - percentage scores, i.e. percentage of staff giving a particular response to one, or a series of, survey questions
  - scale summary scores, calculated by converting staff responses to particular questions into scores. For each of these scale summary scores, the minimum score is always 1 and the maximum score is 5

- For most of the Key Findings presented in tables 7.1 and 7.2, the higher the score the better. However, there are some Key Findings for which a high score would represent a negative result. For these Key Findings, marked with an asterisk and shown in italics, the lower the score the better.

- Care should be taken not to over interpret the findings if scores differ slightly. For example, if for 'KF11. % appraised in the last 12 months' staff in Group A score 45%, and staff in Group B score 40%, it may appear that a higher proportion of staff in Group A have had appraisals than staff in Group B. However, because of small numbers in these sub-groups, it is probably not statistically significant. A more sensible interpretation would be that, on average, similar proportions of staff in Group A and B have had appraisals.

- Please note that, unlike the overall trust scores, data in this section are not weighted.

- Please also note that all percentage scores are shown to the nearest 1%. This means scores of less than 0.5% are displayed as 0%.

- In order to preserve anonymity of individual staff, a score is replaced with a dash if the demographic group in question contributed fewer than 11 responses to that score.

Appendix 1

Key Findings for Hertfordshire Partnership University NHS Foundation Trust benchmarked against other mental health / learning disability trusts

Technical notes:

- The first column in table A1 shows the trust's scores for each of the Key Findings. The same data are displayed in section 3 and 4 of this report.

- The second column in table A1 shows the 95% confidence intervals around the trust's scores for each of the Key Findings.

- The third column in table A1 shows the average (median) score for each of the Key Findings for mental health / learning disability trusts. The same data are displayed in section 3 and 4 of this report.

- The fourth and fifth columns in table A1 show the thresholds for below and above average scores for each of the Key Findings for mental health / learning disability trusts. The data are used to describe comparisons with other trusts as displayed in section 3 and 4 of this report.

- The sixth column in table A1 shows the lowest score attained for each of the Key Findings by a mental health / learning disability trust.

- The seventh column in table A1 shows the highest score attained for each of the Key Findings by a mental health / learning disability trust.

- For most of the Key Findings presented in table A1, the higher the score the better. However, there are some Key Findings for which a high score would represent a negative score. For these Key Findings, marked with an asterisk and shown in italics, the lower the score the better.

- Please note that the data presented in table A1 are rounded to the nearest whole number for percentage scores and to two decimal places for scale summary scores.

Appendix 2

Changes to the Key Findings since the 2015 and 2016 staff surveys

Technical notes:

- For most of the Key Findings presented in tables A2.1 and A2.2, the higher the score the better. However, there are some Key Findings for which a high score would represent a negative result. For these Key Findings, marked with an asterisk and shown in italics, the lower the score the better.

- It is likely that we would see some small change simply due to sample differences between the two years. The final column of the tables shows whether the change in your trust is statistically significant or not. If a change is not significant, then there is no evidence of a real change in the trust score.

- Please note that the trust scores and change scores presented in tables A2.1 and A2.2 are rounded to the nearest whole number for percentage scores and to two decimal places for scale summary scores.

- All percentage scores are shown to the nearest 1%. This means scores of less than 0.5% are displayed as 0%.

- In certain cases a dash (-) appears in Table A2.2. This is either because the Key Finding was not calculated in previous years, or there have been changes in how the Key Finding has been calculated this year.

To enable comparison between years, scores from 2016 and 2015 have been re-calculated and re-weighted using the 2017 formulae, so may appear slightly different from figures in previous feedback reports. More details about these changes can be found in the document Making sense of your staff survey data, which can be downloaded from www.nhsstaffsurveys.com.

Appendix 3

Data tables: 2017 Key Findings and the responses to all survey questions

For each of the 32 Key Findings (Table A3.1) and each individual survey question in the core version of the questionnaire (Table A3.2), this appendix presents your trust’s 2017 survey response, the average (median) 2017 response for mental health / learning disability trusts, and your trust’s 2016 survey response (where applicable).

In Table A3.1, the question numbers used to calculate the 32 Key Findings are also listed in the first column.

In Table A3.2, the responses to the survey questions are presented in the order that they appear within the core version of the 2017 questionnaire.

Technical notes:

- In certain cases a dash (-) appears in Tables A3.1 or A3.2. This is in order to preserve anonymity of individual staff, where there were fewer than 11 responses to a survey question or Key Finding.

- Please note that the figures reported in tables A3.1 and A3.2 are un-weighted, and, as a consequence there may be some slight differences between these figures and the figures reported in sections 3 and 4 and Appendix 2 of this report, which are weighted according to the occupational group profile of a typical mental health / learning disability trust.

- The question data within this section excludes any non-specific responses (‘Don’t know’/’Can’t remember’).

- More details about the calculation of Key Findings and the weighting of data can be found in the document Making sense of your staff survey data, which can be downloaded from: www.nhsstaffsurveys.com

Other NHS staff survey 2017 documentation

This report is one of several ways in which we present the results of the 2017 national NHS staff survey:

1) A separate summary report of the main 2017 survey results for Hertfordshire Partnership University NHS Foundation Trust can be downloaded from: www.nhsstaffsurveys.com. The summary report is a shorter version of this feedback report, which may be useful for wider circulation within the trust.

2) A national briefing document, describing the national Key Findings from the 2017 survey and making comparisons with previous years, will be available from www.nhsstaffsurveys.com in March 2018.

3) The document Making sense of your staff survey data, which can be downloaded from www.nhsstaffsurveys.com. This includes details about the calculation of Key Findings and the data weighting method used.

4) A series of detailed spreadsheets will be made available after publication via www.nhsstaffsurveys.com. In these detailed spreadsheets you will be able to find:
   - responses of staff in your trust to every core survey question
   - responses in every trust in England
   - the average responses for each major trust type (e.g. all acute trusts, all ambulance trusts)
   - the average responses for each major occupational and demographic group within the major trust types
